Aggregate Potential Classification

Primary:

regions that exhibit highly favorable characteristics for hosting natural aggregate deposits.

Secondary:

regions that exhibit some characteristics favorable for hosting natural aggregate deposits.

Tertiary:

regions that exhibit few or no characteristics favorable for hosting natural aggregate deposits.

Pit Potential

High:

polygons that contain large and/or medium sized aggregate pits with substantial reserves.

Moderate:

polygons that contain medium and/or small sized aggregate pits with small reserves.

Low:

polygons that contain only small or reclaimed aggregate pits with little or no reserves.

Pit Inventory

Active / Inactive
