DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

Bedrock in the vicinity of the showings consists of much oxidized and sheared andesitic flow and breccias of the Hazelton group, and a few small dioritic intrusions. Shear zones in these rocks strike northeasterly. The mineral deposits are in the shear zones, and include disseminated chalcopyrite and pyrite as well as several small, very irregular, vein-like bodies of quartz. The latter are sparingly mineralized with chalcopyrite, galena, sphalerite, and pyrite, and have a maximum width of less than 2 feet. Diamond drilling in 1955 indicated a zone of sheared and altered volcanics partly mineralized over a length of 120 feet; the deeper holes cut lower grade mineralization than that encountered near the surface. A sample from a pile of mineralized material on the Golden Glory No. 1 claim assayed; Gold, 0.01 ounce a ton; silver, 2.9 ounces a ton; copper, 4.4%.

HISTORY OF EXPLORATION AND DEVELOPMENT  
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

This property is located at about the 2,500 foot elevation on Gerow Creek, on the southwest side of Decker Lake, some 60 miles southeast of Smithers.

The mineral deposits on the property have reportedly been known since the early 1900's; some ore was reported shipped in 1915 from underground workings. The Golden Glory, Silver Glance, and other claims were owned by Messrs. Gerow, Reid, and McLean, of Burns Lake, in 1926. Intermittent exploration work was reported by these owners until 1940. Exploration and development work to this date was apparently done in 4 adits, totalling some 390 feet of drifts and crosscuts.

No further activity was reported until 1955 when about 35 claims and fractions covering these showings were owned by A.B. Goodridge and Cyril Keyes. Diamond drilling by the owners totalled 386 feet in 7 holes. Trico Explorations Ltd. and Moneta Porcupine Mines, Limited, optioned the property later in the year and put down 6 diamond drill holes totalling 1,000 feet. The option was subsequently dropped.

The property was acquired as the MO, HRS, GRE, DE, and Lark groups (37 claims) by Decker Lake Mines Limited, which was incorporated in April 1970. During 1971 an electromagnetic survey was carried out over 12 line-miles.

Associated minerals or products  
Minéraux ou produits associés - Lead, zinc, silver.
