DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

Several barite beds containing minor amounts of galena, sphalerite, and trace chalcopyrite occur in Devonian silty shales on the southwest limb of an anticline cored by Devonian limestone of the Akie Reef. A small high-grade showing of galena occurs at the upper contact of the reef, but appears to be along a north trending fault zone.

Associated minerals or products
Minéraux ou produits associés

- Zinc, barite.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The showings are located near the head of Paul River some 65 km north of the north end of Williston Lake.

The Pie claims were staked by Rio Tinto Canadian Exploration Limited in 1978. An extensive soil sampling and hand trenching program was carried out in 1979 and five drill holes were completed in 1980.
